ZOHIR RAYHAN

Web Developer and Server Administrator

+8801317540501 admin@zohirrayhan.me https://zohirrayhan.me Bangladesh Bangladeshi

SUMMARY

I am an experienced web developer and server administrator specializing in AI integration and performance optimization. I have a proven track record of developing innovative solutions that enhance efficiency and user experience, such as the E-Family Court platform and DIU Routine Scrapper. My strong technical skills and commitment to excellence enable me to contribute effectively in dynamic environments

EXPERIENCE

Full-stack Developer (Laravel)

Office of the Student Affairs - Daffodil International University

2024 - 06/2025 Dhaka, Bangladesh

Developed and maintained Student Hub, the official university student Management platform automating student services link: https://studentshub.daffodilvarsity.edu.bd/team

SKILLS

Backend & Frontend Development

Laravel, PHP, Python, Flask, Microsoft SQL Server, MySQL, JavaScript, AJAX, HTML, CSS, Blade Templates

Mobile Development

Java, Android, AndroidX, WebView

APIs & Integration

JWT, Firebase Messaging, Firebase Admin, FCM, Google APIs, Gmail API

Server & Infrastructure:

Server Administration, Linux Management, LiteSpeed Configuration, cPanel/WHM, CloudLinux LVE, Imunify360 Security, DNS & Email Setup, Server Migration, SSL Implementation, Performance Tuning, Troubleshooting

EDUCATION

Bachelor of Computer Science and Engineering

Daffodil International University

09/2021 - 09/2025 Dhaka, Bangladesh

GPA **3.35** / 4.00

Higher Secondary Certificate

Mymensingh Government College

01/2018 - 01/2019 Mymensingh, Bangladesh

CERTIFICATION

Building the Next Generation Systems

Powered by — Microsoft Link

Prompt Engineering and Creative Innovation

Sponsored by — DPTI , International Online University & Goedu Link

ACHIEVEMENTS

Datathon Contest

Achieved 1st Runner up in Datathon 2023 Link

PROJECTS

E-Family Court – National e-Judiciary Platform

06/2025 - Present

https://efamilycourt.judiciary.gov.bd/

- Contributed as full stack developer to the development of an end-to-end digital case filing system for the **E-Family Court** project in Dhaka and Chattogram Courts. The platform enables citizens to file cases online, track progress, make secure payments, and receive SMS/email updates. Judges can access case details, manage hearings, and issue orders, while lawyers handle client cases and submit documents online. Court staff verify documents, process registrations, and generate reports.
- **Tech Stack**: Laravel , PHP , Microsoft SQL Server , JavaScript, AJAX, JWT, HTML, CSS , dompdf

DIU Routine Scrapper

https://routine.zohirrayhan.me/

A centralized automation platform for Daffodil International University for class routines

- Handles users, community content, and FCM devices for access control, coordination, and push notifications.
- Centralized system for teacher databases, class representatives, and course catalogs
- Scrapes official DIU routines, builds the CSE database, and precomputes batch, teacher, and room-wise schedules.
- Manages booking requests using real-time availability.
- **Tech Stack(Web)**: Python Flask SocketIO JWT, Firebase Admin FCM, Google APIs Gmail GA4, pandas openpyxl, ReportLab PyPDF2, HTML CSS JS , JSON Excel storage
- **Tech Stack(Android)**:Java, AndroidX, WebView, Firebase Messaging, Analytics, Play Core updates, WorkManager, AlarmManager.

Student Hub – Official University Student Management System

https://studentshub.daffodilvarsity.edu.bd/team

- Orientation Module: Incoming students can sign up for orientation, create digital food tokens, and choose preferences for sports/events participation.
- Club Management System: Built dedicated panels for each club to handle activities, member applications, live tracking, certificate generation, payment handling, and fund administration.
- Course Management System: Implemented a dynamic enrollment process allowing students to choose and register for courses, with data scraped and synchronized from the GoEdu platform.
- **Tech Stack**: Laravel, Blade Templates, MySQL, JavaScript, AJAX, JWT, HTML, CSS.

Blood Bridge – Blood Donor Finder Platform

https://blood.shafinahmed.site/find-donor/dummy

- Implemented real-time location sharing to track blood donor ETA and route.
- Geolocation-based donor search with interactive maps to filter donors by blood group, location, and radius (5–20 km) with visual coverage for quick identification.
- Community Feed: Enabled users to post urgent blood requests, view nearby appeals, and build a collaborative support network.
- **Tech Stack**: Python (Flask), Leaflet.js, HTML, CSS, JavaScript, MySQL.
